CONTEST

Hash codes

```
#!/usr/bin/env bash
#Hashes a file, ignoring all:
# - whitespace
# - comments
# - asserts
# - includes
# - pragmas
#Use to verify that code was correctly typed.

#usage:
#  chmod +x hash.sh
#  cat a.cpp | ./hash.sh
#or just copy this command:
#  cat a.cpp | sed -r '/(assert|include|pragma)/d' | cpp -fpreprocessed -P | tr -d
#    ↪ '[:space:]' | md5sum | cut -c-6
sed -r '/(assert|include|pragma)/d' | cpp -fpreprocessed -P | tr -d '[:space:]' | md5sum
  ↪ | cut -c-6
```

```
cin.tie(0)->sync_with_stdio(0);
return 0;
}
```

Test on random inputs

```
#!/usr/bin/env bash
#runs 2 programs against each other on random inputs until they output different results
#source: https://github.com/Errichto/youtube/blob/master/testing/s.sh
#usage:
#  chmod +x test.sh
#  ./test.sh
for((i = 1; ; ++i)); do
  echo $i
  ./test.out > in
  diff --ignore-all-space <./a.out < in <./brute.out < in || break
done
```

## Tips and Tricks
- [C++ tips and tricks](https://codeforces.com/blog/entry/74684)
- use '#pragma GCC optimize "trapv"' to invoke RTE (Run Time Error) upon integer overflow
- use 'mt19937 rng(chrono::steady_clock::now().time_since_epoch().count());' to generate
  ↪ random integers
  - 'shuffle(arr.begin(), arr.end(), rng);'

### Troubleshooting
'''
/* stuff you should look for
 * int overflow, array bounds
 * special cases (n=1?)
 * do smth instead of nothing and stay organized
 * WRITE STUFF DOWN
 * DON'T GET STUCK ON ONE APPROACH
*/
'''
